

## KUUBE SMARTBENCH INSTALLATION CRITERIA

## CREATING COMMUNITIES IN SMART CITIES

The soul of every city and institution is the community. Their right to exist is lost without those who live there and who visit the institution. This is why everyone wants to provide an interesting, useful or even innovative solution for the people and try to increase the associated pleasant feelings and involvement with them. Smartbenches help to achieve this and therefore they're prove to be a good investment because, thanks to their functions, they can become cornerstones of the community spaces.

Last but not least, with their modern, timeless design, they decorate public spaces on their own. Our goal is that „**Let's meet at the bench.**” become the basic sentence of every community.

## SUSTAINABLE LIFESTYLE

Recent times have shown that we need to strive for awareness and sustainability in all areas of life: daily shopping, meals or even working hours in the home office.

We at Kuube consider it extremely important to have our smartbenches and other smart city solutions strengthen this approach, that is why we have chosen to work with renewable energy: **the operation of our benches is based on 100% renewable, solar energy.**

## INSTALLATION CRITERIA FOR OPTIMAL OPERATION

According to this, one might think that in order to place and operate a smartbench, we only need sunlight. This is partly true and not. So let's see what are the criteria that are needed for installing Kuube smart street furniture:

- **Sunny location** that is not shaded by plants or buildings/roofs. If these conditions are met, our products will be operate during winter too.
- **3G coverage** for free wifi operation and support.
- **Solid ground for placing the bench** (asphalt, concrete, paving stone, decorative stone, etc.). The benches can also be installed on a green surface, however, due to the expected intensive usage, the green surface can be destroyed in a matter of days, which can turn into a muddy area in rainy days.
- **Safe, busy environment** (although our products resistant to damage, it is advisable to choose a high-traffic, central location so that as many people as possible can use the street furniture).

With these, all the conditions are given for the optimal operation of Kuube smartbenches, so they can be placed in the given location without compromise.
